## **Eyebrow Aftercare**

Once your treatment has been completed, Frequently for the first day blot your eyebrows with a clean tissue. Before bed, and with a dampened cotton pad from cooled boiled water gently wipe your brows, and apply a thin fresh layer of ointment. Repeat morning and evening for 10-14 days .

For 2 weeks from the date of your treatment, you must do/not do the following:

- Do NOT apply makeup or creams directly to your brows, you can wear makeup/apply creams around the brows, but being careful not to get any on the brow. Please note glycolic/AHAs and other active ingredients can result in your brows fading faster.
- Do NOT soak your brows, this means you cannot let water run down your face in the shower, head in a swimming pool/ocean/ sauna/ steam rooms etc
- Do NOT exercise to the level where you will sweat. Saline solution is used in tattoo removal, so sweating through your brows will result in poor pigment retention.
- Do NOT expose your eyebrows to UV rays from the sun or sun bed. Once they have healed, if you are exposing them to UV rays then a high factor sunblock must be worn, as it will fade your brows prematurely.
- DO apply ointment to keep your brows hydrated.
- The brow procedure will not affect the hairs of your brow so you will need to continue to tweeze/wax or thread unwanted hair, and if you have chosen a brow colour darker than you natural brows tinting may be required. But please wait till your brows are healed before doing so.

### WHAT TO EXPECT DURING THE FIRST 2-4 WEEKS AFTER YOUR APPOINTMENT

- For the first day or two the area may be a little swollen, irritated and red.
- The colour will darken by day 2 after the treatment(it is essentially forming a scab), and will continue to feel dark until the brows flake, at which point the colour will lighten.
- Between day 4-7, the brows will begin to flake and shed . Do NOT pick, or help the flaking along.
- The brows will then often appear very light in colour in the areas that have flaked. This is because the brows are not fully healed at this point. The deeper layers of skin are still healing and masking the pigment. The pigment will strengthen in appearance over the next few weeks. You will not see the fully healed result until 4-5 weeks post treatment. Once the flaking is done you may wear makeup on your brows to even things out.

Before leaving your appointment, you will be offered a second appointment in around 6-8 weeks. This appointment is where we perfect the brows and make any adjustments.
